DETAILED ACTION

Claim Rejections - 35 USC § 103

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Takeuchi et al., USP 6,136,249 in view of Sano, USP 4,702,156.

The cited primary reference teaches the basic claimed process of molding a composite article useful in automobiles. The detailed process steps include forming a first portion of the composite from a first injected material in a first injection molding cavity. The first portion includes connecting features for union with the second portion. The first portion is placed within a second molding cavity and a second plastic is injection molded to form an integrally attached second portion to the first portion. See col. 5, line 40 to col. 6, line 35 and claims 8-11.

The cited primary reference does not set forth the claimed fascia assembly to be mounted of a motor vehicle.

The cited secondary reference teaches the basic claimed process of forming a fascia assembly for attachment to an automobile. The detailed process steps include

Art Unit: 1732

injection molding a fascia assembly to form a bumper part that includes openings for grill and lamp components. The method further includes preparation of a resin material. After the material is prepared as desired, the detailed steps include providing a material for the outer layer, and a material for the core layer and injection molding the assembly by injecting the materials using a co-injection molding apparatus or two injection units. The assembly formed has a grill portion formed of the outer layer, with the remaining portions being multi-layered. See col. 5, lines 43-65; col. 7, line 30 to col. 8, line 25.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the molding method set forth in the primary reference, to include outer fascia assemblies as set forth in the added reference, as the method lends itself to the molding of any number of conventional composites useful for automobile applications.

Allowable Subject Matter

Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. USP's 4414170; 4766025; 5947511; 6126877; 6348169; 6551540.
